Precipitation probability					
90%	90%	30%	40%	70%	70%

Forecast for Saturday 08 Jan 2022

Weather: A band of snow will push east overnight briefly bringing blizzard conditions through the early hours, but soon turning to rain. This leaves spells of heavy rain across all parts through morning and a thaw of lying snow. The afternoon brings drier, brighter periods as well as a return to cold air and an increasing threat of snow showers, these falling as rain below around 300m and becoming frequent through evening.

Chance of cloud free mountain/hill tops above 600m: 40% through the middle of the day, otherwise very little chance.

Visibility: Very variable through the day. Cloud will shroud most slopes above 300m through morning with rain turning lower slopes hazy. This cloud lifts and breaks by late morning to give some brief cloud free periods on the tops, but conditions will gradually deteriorate as snow showers develop, these bringing whiteout conditions on highest ground as well as cloud often down to 300m again. Some limited shelter afforded to east facing slopes.

03:00 on Sat 08 Jan 2022	N/A	N/A	N/A

Forecast for Sunday 09 Jan 2022

Weather: Another cold, windy day with showers, these falling as snow above 200-300m through morning. A more organised spell of rain or sleet looks likely through the middle of the day as the snow level rises. Increasingly dry from sunset with some clearer spells into the evening.

Maximum wind: West 25-30mph, becoming 10-15mph by evening.

Chance of cloud free mountain/hill tops above 600m: 20%.

Visibility: Cloud, rain and snow will severely limit visibility away from lower slopes with cloud remaining largely extensive above around 400m but with westerly winds, eastern slopes will see the best of any shelter.

Temperature: **Valleys:** 1 or 2 Celsius rising to 5 or 6.
At 600m: Around freezing throughout.
Freezing level: 400m rising above summits by late morning.
